Procedure Control Document

DESCRIPTION: Treatment Plans define the progression

of care for a patient incorporating the content, frequency and type of contact

anticipated.

PURPOSE: Treatment Plans are used to plan how

many visits and how long a patient is estimated to be on the caseload.

Treatment Plans identify how often a patient should be reviewed by a senior nurse as to their suitability for discharge

or additional treatments.

RESPONSIBILITY: The HCP team leads are responsible for

using the treatment plans when entering patient details into *Team Planner* on

RiO.

The HCP team leads are responsible for allocating visits to their team in line with what has been set out in the *Treatment*

Plans.

DOCUMENTS: Treatment Plans

Planning Norms

FREQUENCY:

Ongoing: *Treatment Plans* are used with every patient who is referred to the EPCT / VW and those who are on the caseload

PROCEDURE:

Team Planner: When uploading a patient onto Team Planner the HCP team lead uses the Treatment Plans to set out

- The number of visits a patient will receive
- 2) How frequent the visits will be
- What treatment that patient requires

When the initial treatment plan is one week away from completion, ie: there is only one more week of visits left on *Team Planner* a white icon flashes up next to the patients name. This lets the HCP team lead who manages the caseload on Team Planner know that one of the following needs to be done with that patient.

- 1) Discharged
- 2) Additional Treatment plans added
- Referred to another department (ie: Tele-Health)

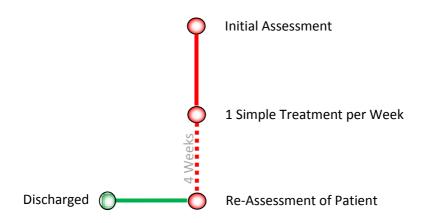

Changes: If any changes need to be made to the treatment plans the approval of Kate Corlett is required

The template used to build the treatment plans can be found on the CD in the Management Control System Manual.

Example: Vital Sign Monitoring

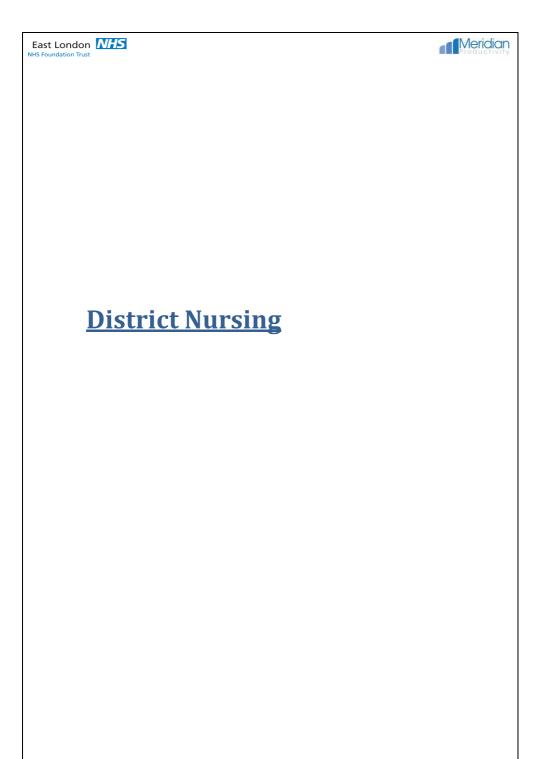

Notes:

- The Initial Assessment can either be a simple assessment or complex assessment depending on the referral and patients needs
- 2) The first treatment is administered at the initial assessment
- 3) Re-Assessment of patient refers to a visit by a senior HCP (Band 6 or 7). During this re-assessment the senior HCP will also administer the relevant treatment
