

ELFT Digital
East London NHS Foundation Trust

As we use technology more in our personal lives, our promise to improve the quality of life for all we serve means we are dedicated to a digital journey as a Trust.

Traditional IT services will need to transform, solving problems, creating choice and removing barriers.

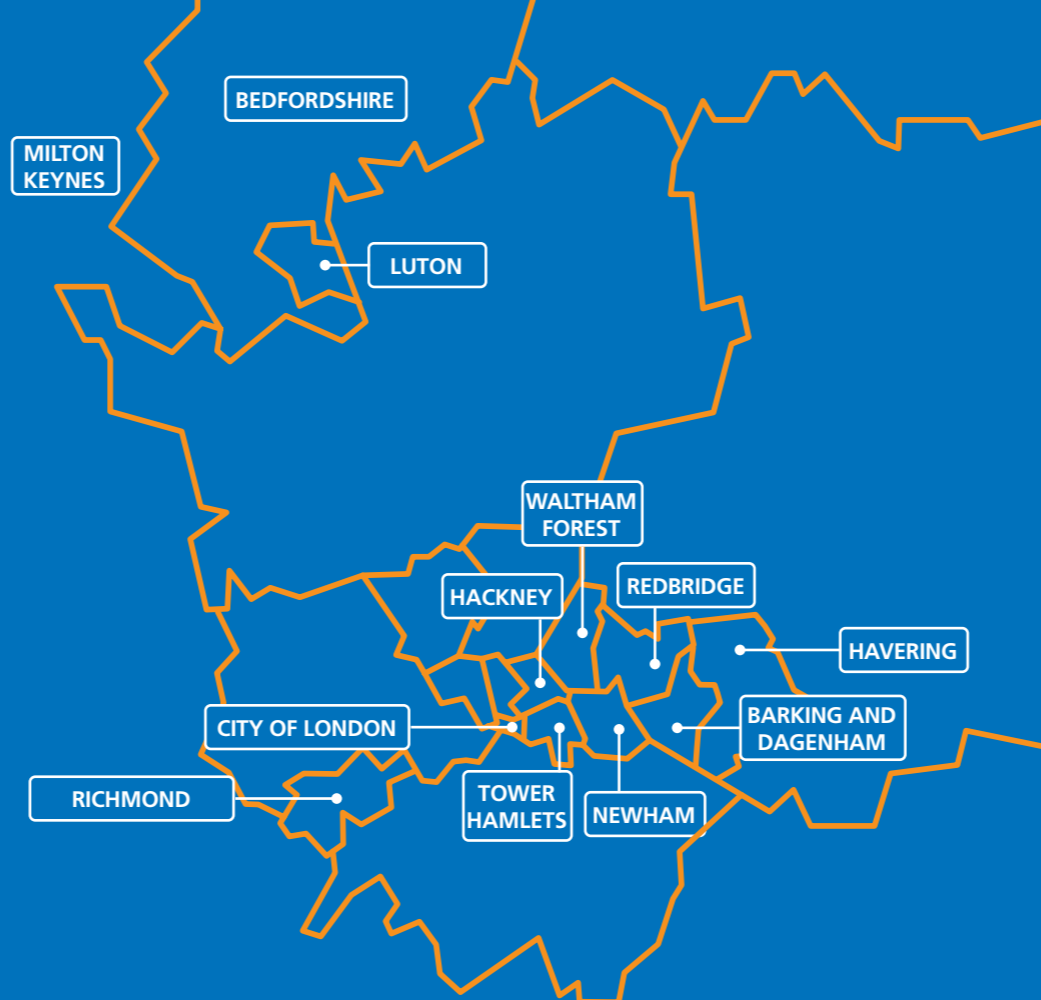

ELFT Digital promise to use technology to make our services better, quicker and more efficient, where our people - our service users, carers, staff and partners - come first.

Our vision for the future:

- individualised information is available electronically and joined-up with partners in care
- we use technology and data to solve problems, free up staff time and improve experience of care.
- we engage service users and staff in their own wellbeing.
